VitaParms light is free software (open source) under the MIT licence and is provided free of charge. This booklet may be copied, modified and passed on under the same terms; the copyright notice must be kept.

**Not a medical device.** VitaParms light is a personal diary for health-related data. It makes no diagnoses, gives no treatment recommendations and replaces neither medical nor pharmaceutical advice. Use at your own risk. In an emergency: **112** (UK: **999**).

**Sample data:** All persons, addresses, telephone numbers, readings, diagnoses and appointments shown are fictitious. The medicines shown are examples only and not a recommendation.

**Trademarks:** All product and company names mentioned are trademarks or registered trademarks of their respective owners.

Every function is explained in detail in the **User Guide**: in VitaParms light under Help › User guide or with the F1 key.

5 Medication 5

6 Appointments, printouts and backup 6

# 1 Welcome

VitaParms light is your personal health diary. You record blood pressure, pulse, blood glucose and other readings, keep track of your medication and get reminded of appointments. This booklet shows you the most important steps in a few minutes.

> **Legal note:** VitaParms light is a diary, **not a medical device**. It does not replace your doctor. Always discuss unusual readings with your practice.

## 1.1 Installing

**Windows** Run `VitaParms-light-0.31.2-Setup.exe` – VitaParms light is installed in `C:\VPlight`.

**macOS** Open `VitaParms-light-0.31.2-Setup.dmg` and run the installer.

**Linux** Run `VitaParms-light-0.31.2-Setup.run` – on Debian/Ubuntu alternatively install the package `vitaparms-light_..._amd64.deb` with `sudo apt install`.

**Tablet / smartphone** Install the Android app **VitaParms light**.

## 1.2 The first start

1. Choose the language and confirm the note with Understood.
2. Click Create new database.
3. Enter your name and a password (at least 8 characters).
4. Print or save the **recovery key** and keep it safe. Without the password and without the key nobody can get at the data any more – not even you.
5. Enter your name in the master record and click Save.

From now on VitaParms light asks for your password every time it starts.

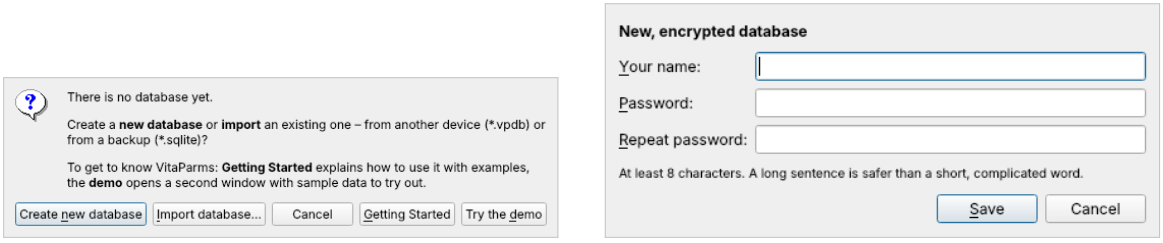

**Fig. 1:** Create a new database (left), choose name and password (right)

# 2 The main window

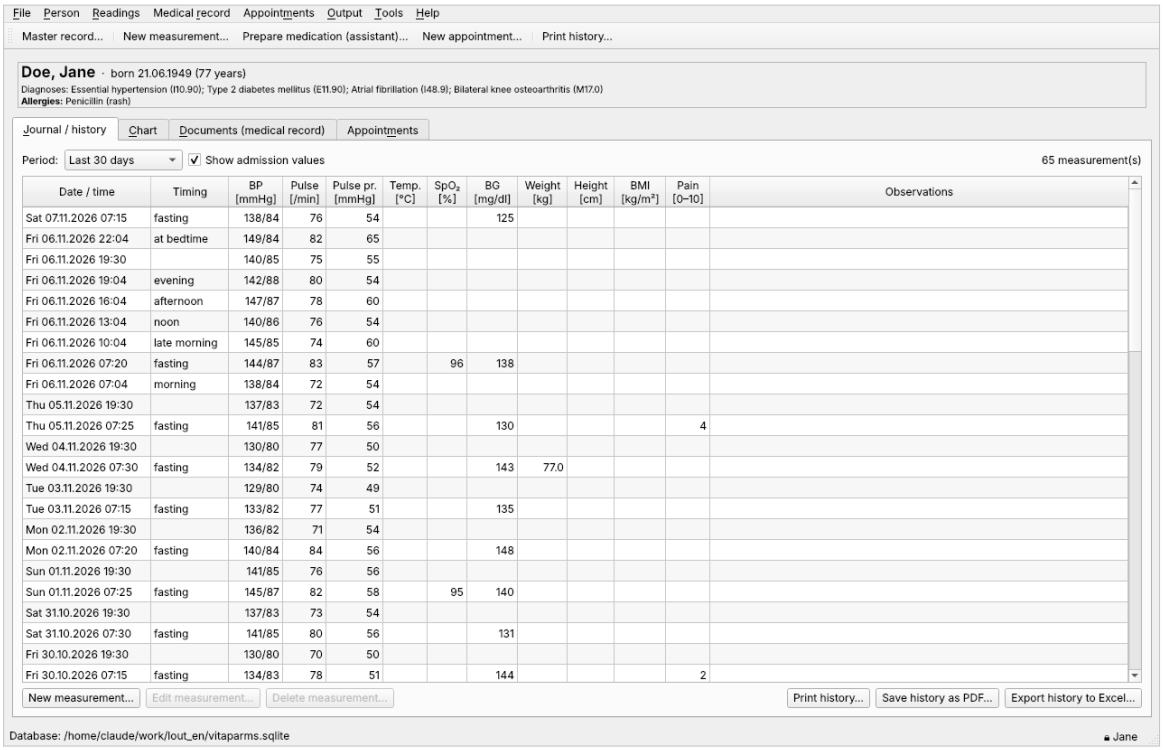

**Fig. 2:** The main window of VitaParms light

**At the top** the menus and the large buttons for what you need most often: New measurement..., Prepare medication (assistant)... and New appointment....

**Below** your name, your age and your latest readings.

**Tabs** **Journal / history** shows all measurements as a list, **Chart** as curves. Further tabs: appointments, documents.

**Tip:** Would you like to try VitaParms light first? Help » Start demo database opens a sample person with readings over several months. Your own data are not touched.

# 3 Filling in the master record

Open the master record with Person » Master record or Ctrl + E. It has five tabs:

**Person** name, date of birth, address, telephone.

**Doctors & relatives** your GP practice, specialists, pharmacy and people who should be informed in an emergency.

**Diagnoses** your illnesses, for example *high blood pressure*.

**Medication plan** your medicines with dosage (see Chapter 5).

**Admission** your baseline readings – for example height and weight.

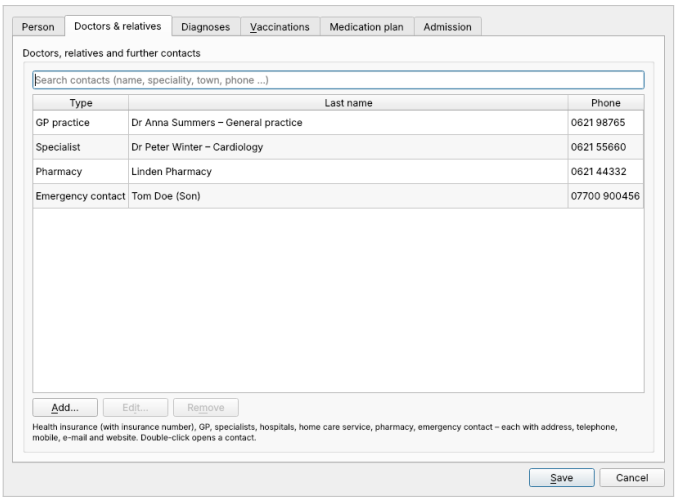

**Fig. 3:** Doctors and relatives in the master record

You do not have to fill in everything at once. Complete the master record bit by bit.

# 4 Recording a measurement

1. Click New measurement… (or Ctrl + M).
2. Date and time are already filled in – change them only if you measured earlier.
3. Enter the readings: blood pressure, pulse, temperature, oxygen ($SpO_2$), blood glucose, weight. Leave empty what you did not measure.
4. If you are in pain, click the matching number on the **pain scale**: 0 means "no pain", 10 "worst pain imaginable".
5. Click Save.

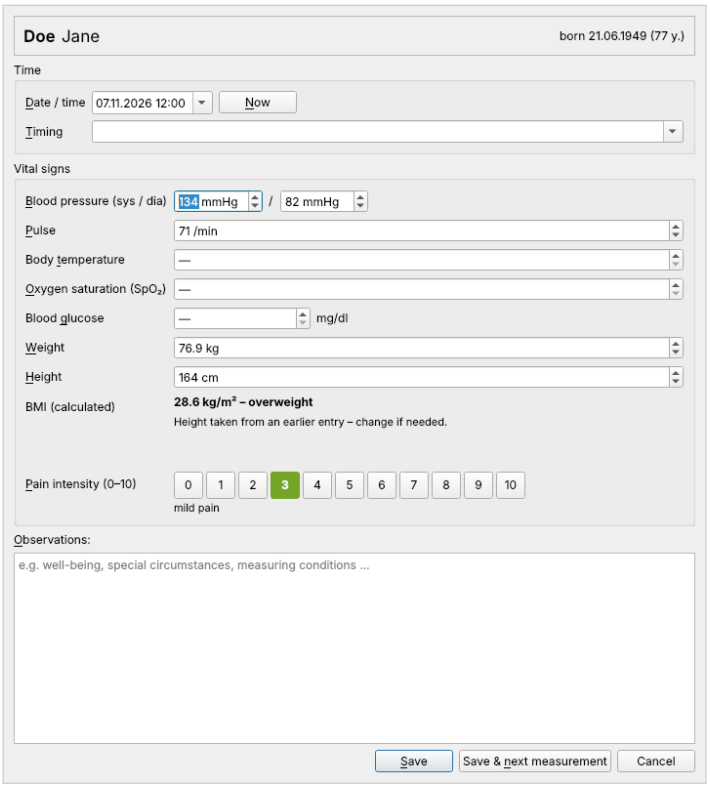

**Fig. 4:** The measurement form

VitaParms light calculates the **BMI** itself as soon as weight and height are known.

## 4.1 Day profiles

Your doctor wants you to measure blood pressure or blood glucose several times in one day? Choose Readings » BP day profile or Readings » BG day profile. VitaParms light creates the measurement times as appointments and reminds you of every single measurement.

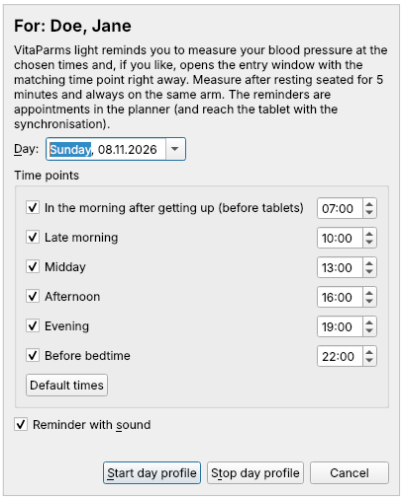

**Fig. 5:** Planning a BP day profile

# 5 Medication

## 5.1 Adding a medicine

1. Open the master record (Ctrl + E), tab **Medication plan**.
2. Click Add...
3. Enter the name, strength and the dose for morning, noon, evening and night.
4. Click OK and then Save in the master record.

> **Warnings:** For certain medicines – for example blood thinners – VitaParms light shows a warning. Pay attention to it and, if in doubt, talk to your practice or

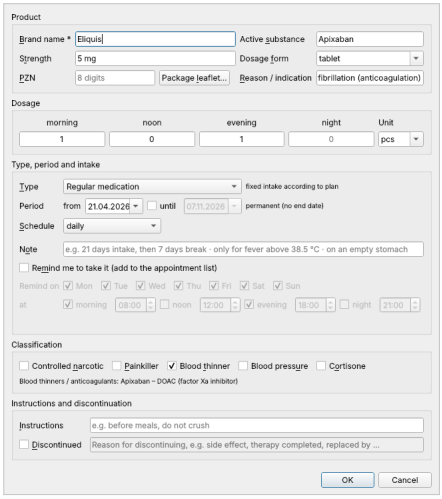

**Fig. 6:** Adding a medicine

pharmacy.

## 5.2 Preparing medication

The assistant Prepare medication (assistant)… (Ctrl + Shift + M) guides you compartment by compartment through your daily or weekly pill box and ticks off what you have prepared.

## 5.3 For the pharmacy

Output » Medication list for the pharmacy prints a clear list of your medicines – handy for the pharmacy or a hospital stay.

# 6 Appointments, printouts and backup

## 6.1 Appointments

New appointment… (Ctrl + T): enter title, date, time and the reminder, then Save. VitaParms light reminds you in good time.

## 6.2 Chart, printing, PDF and Excel

On the **Chart** tab you see your readings as curves – for a day, a week or a month. Using the Output menu you print chart and readings or save them as a PDF or Excel file, for example for your next doctor's appointment.

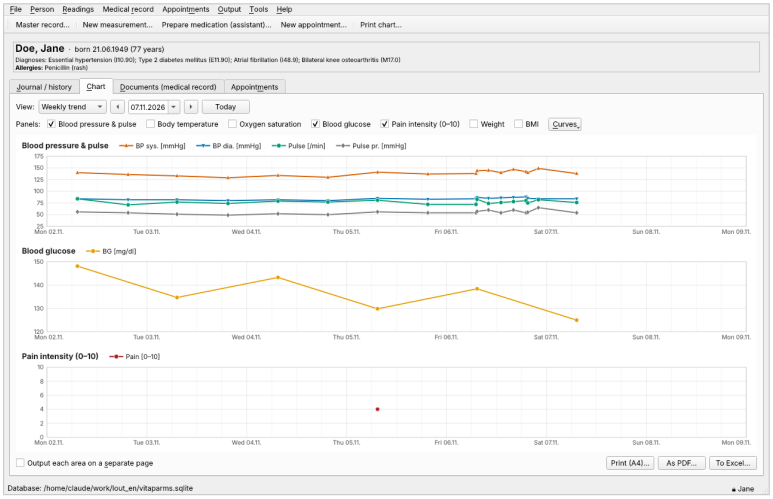

**Fig. 7:** The chart

## 6.3 Tablet and smartphone

With File » Sync with tablet via USB you bring computer and app to the same state. The instructions are in the User Guide.

## 6.4 Backing up your data

VitaParms light creates backups automatically. Under Tools » Settings it is best to choose a folder on a USB stick or an external hard disk – then your data are safe even if the computer breaks down.

## 6.5 Learn more

The **User Guide** explains every function in detail: Help » User guide or F1.
