# VitaParms light

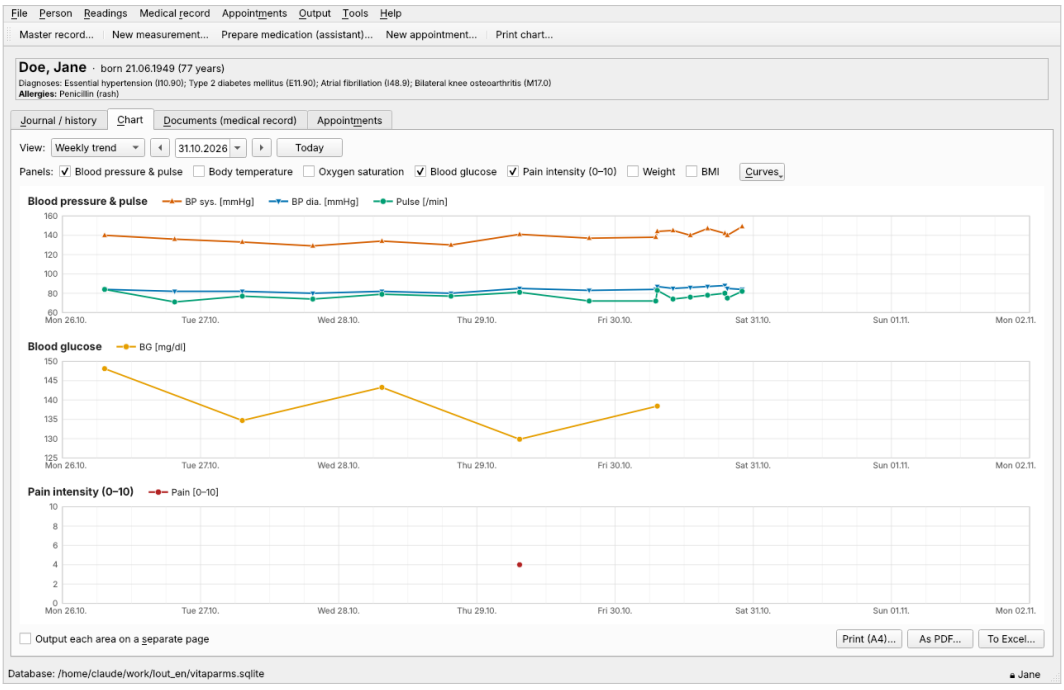

The simple diary for your health readings

## User Guide

Explained step by step

**Version 0.28.1**

for Windows, macOS, Linux, Android tablets and smartphones

**Michael Bergmann**

October 2026

**VitaParms light – User Guide**
for program version 0.28.1, as of October 2026

© 2026 Michael Bergmann
Web: https://mbergmann-sh.de GitHub: https://github.com/mbergmann-sh

VitaParms light is free software (open source) under the MIT licence and is provided free of charge. This guide may be copied, modified and passed on under the same terms; the copyright notice must be kept.

**Not a medical device.** VitaParms light is a personal diary for health-related data. It makes no diagnoses, gives no treatment recommendations and replaces neither medical nor pharmaceutical advice. Use at your own risk. In an emergency: **112** (UK: **999**).

**Sample data:** All persons, addresses, telephone numbers, readings, diagnoses and appointments shown are fictitious. The medicines shown are examples only and not a recommendation.

**Trademarks:** All product and company names mentioned are trademarks or registered trademarks of their respective owners.

The short version with the most important steps is the booklet **Getting Started**: in VitaParms light under Help » Getting Started.

14 Help and answers 28

# 1 Welcome

VitaParms light is a **diary for your health readings**. You enter what you have measured – for example blood pressure, pulse or blood glucose – and VitaParms light shows you the history as a list and as a chart. It also keeps your medication, your doctor's appointments and important documents such as letters from your doctor.

VitaParms light is the **simple edition** of VitaParms. It is meant for **one person**: you. Everything is limited to the essentials so that you quickly find your way around.

## 1.1 What can VitaParms light do?

- **Master record:** your personal details, doctors and relatives, diagnoses, medication plan and the readings on admission.
- **Readings:** blood pressure, pulse, body temperature, oxygen saturation ($SpO_2$), blood glucose, weight and height. VitaParms light calculates the **BMI** for you. In addition there is the **pain intensity** from 0 to 10.
- **Assistants:** for the **blood glucose day profile**, the **blood pressure day profile** and for **preparing your medication**.
- **Charts and printouts:** trend charts by day, week, month and year – print on A4, save as PDF or export to Excel.
- **Medication:** medication plan, warnings (for example for blood thinners), list for the pharmacy, stock and re-ordering.
- **Appointments and reminders:** doctor's appointments, reminders for readings and medicines.
- **Tablet and smartphone:** VitaParms light is also available as an app. Computer and app synchronise via the USB cable.

## 1.2 Your data are protected

VitaParms light stores everything **encrypted**. Nobody can read the data without your password – not even someone who copies the file. That is why you sign in with your name and password each time you start.

**Important:** During setup VitaParms light shows a **recovery key**. Print it out and keep it in a safe place. It is the only way to get at your data if you ever forget your password.

## 1.3 Not a medical device

**Legal note:** VitaParms light is a personal diary – **not a medical device**. The program makes no diagnoses and does not replace the advice of your doctor. Notes such as "reading raised" are for orientation only. Use at your own risk. In an emergency call **112** (UK: **999**).

## 1.4 VitaParms light and VitaParms

VitaParms can do more: several persons (for example when caring for relatives), further readings such as INR, peak flow, fluid balance or bowel movements, wound documentation and synchronisation via your own website. Both editions use **the same data format**. If you need more later, simply take your data over into VitaParms (Chapter 13).

## 1.5 How to read this guide

- Menu commands look like this: Readings » New measurement. This means: click Readings at the top and then New measurement.
- Keys look like this: Ctrl + M. Hold down Ctrl and press M.
- Buttons look like this: Save.
- The **tabs** in the main window are called, for example, **Chart**.

**Tip:** Would you like to try VitaParms light first? Help » Start demo database opens a second window with a fictitious person and a year of readings. Your own data are not touched (Section 14.1 (p. 28)).

# 2 Installation and setup

## 2.1 Installing

**Windows** Run `VitaParms-light-0.28.1-Setup.exe` and follow the wizard. VitaParms light is installed in the folder `C:\VPlight`. Afterwards you will find VitaParms light in the Start menu and on the desktop.

**macOS** Open `VitaParms-light-0.28.1-Setup.dmg` and run the installer inside. VitaParms light goes into the folder `Applications/VPlight`.

**Linux** Run `VitaParms-light-0.28.1-Setup.run`. VitaParms light is installed in your home folder (`~/VPlight`) and appears in the applications menu.

**Tablet and smartphone** Install the app **VitaParms light** (Android). See Chapter 11.

> **Note:** Do you already have an older version of VitaParms light? Simply run the new installer. It removes the old version and installs the new one into the same folder. Your data are kept.

## 2.2 The first start

On the first start VitaParms light guides you through the setup:

1. **Choose the language:** German or English.
2. **Read the note:** VitaParms light is a diary, not a medical device. Click Understood.
3. **Start fresh or take over data:** Click Create new database. If you already have data from another device, choose Import database…
4. **Choose name and password:** Enter your name and a password – twice, so that no typing error creeps in. The password needs at least 8 characters. A short sentence is easy to remember and still secure, for example *My cat is called Felix!*
5. **Keep the recovery key:** VitaParms light shows it. Print it or save it on a USB stick. Only then can you continue.

6 **Create the master record:** VitaParms light opens the master record. Enter at least your name and click Save. You can add everything else later.

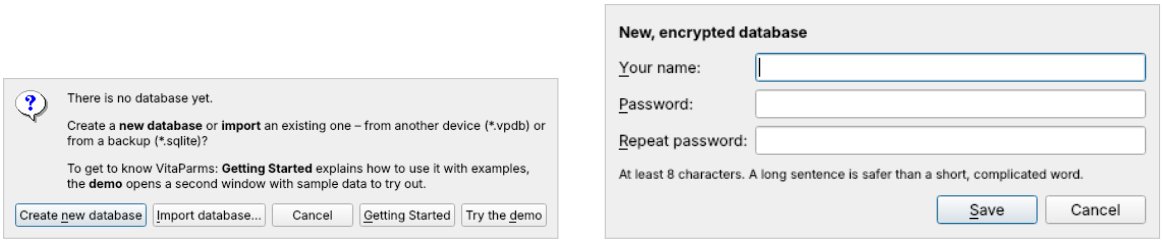

**Fig. 1:** First start: create a new database (left), choose name and password (right)

**Fig. 2:** The recovery key – please print it and keep it safe

## 2.3 Signing in

Each time you start, VitaParms light asks for your name and password. The name is already filled in; you only enter the password and press Enter.

If you leave the computer for a while, lock VitaParms light with File › Log out / lock or Ctrl + L. If you like, VitaParms light also locks itself when you have not used it for a while (Tools › Settings).

> **Forgotten your password?** In the sign-in window, click Recovery key... and enter the key you printed during setup. Then choose a new password.

# 3 The main window

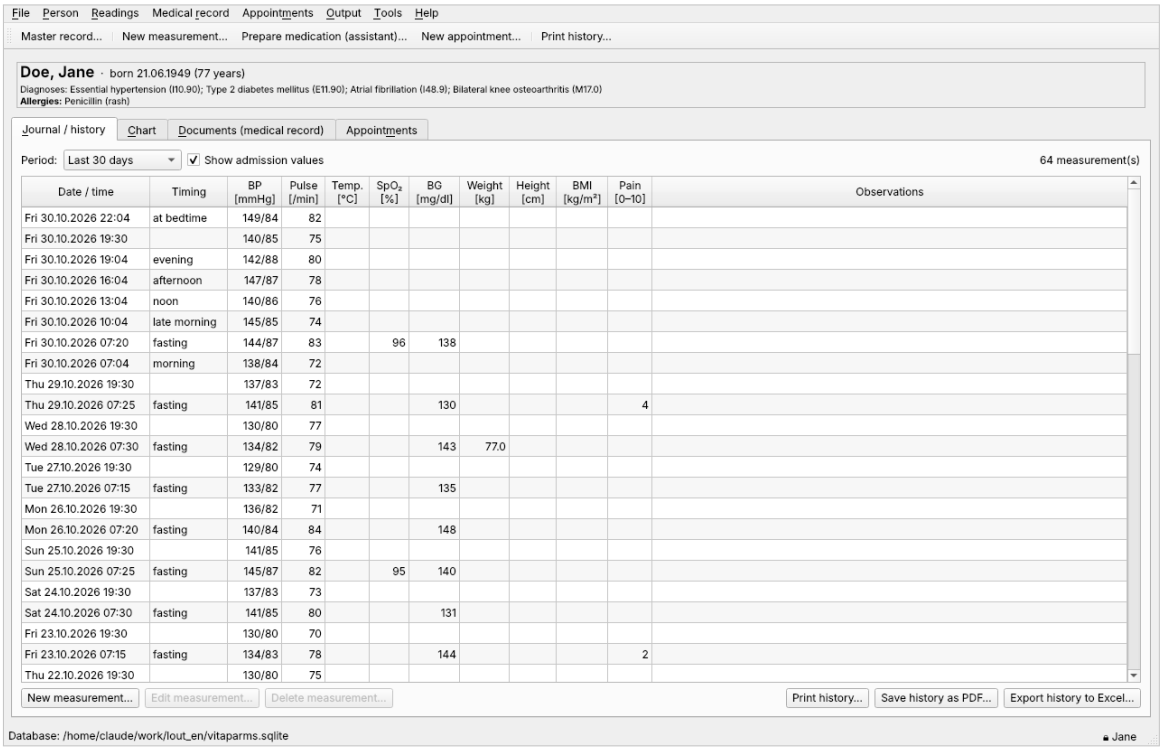

**Fig. 3:** The main window with the journal

The main window has four areas – from top to bottom:

**Menus** File, Person, Readings, Medical record, Appointments, Output, Tools and Help. All commands are here.

**Toolbar** The most frequent commands to click: Master record..., New measurement..., Prepare medication (assistant)..., New appointment... and Print history... (on the **Chart** tab: Print chart...).

**Header** Your name, date of birth and age, your diagnoses and allergies. Important notes also appear here, for example when a medicine needs re-ordering.

**Tabs** **Journal / history** (all readings as a list), **Chart**, **Documents (medical record)** and **Appointments**.

At the bottom, the **status bar** shows where your data are stored and, on the right, a padlock with your name: you are signed in and the data are encrypted.

## 3.1 The menus at a glance

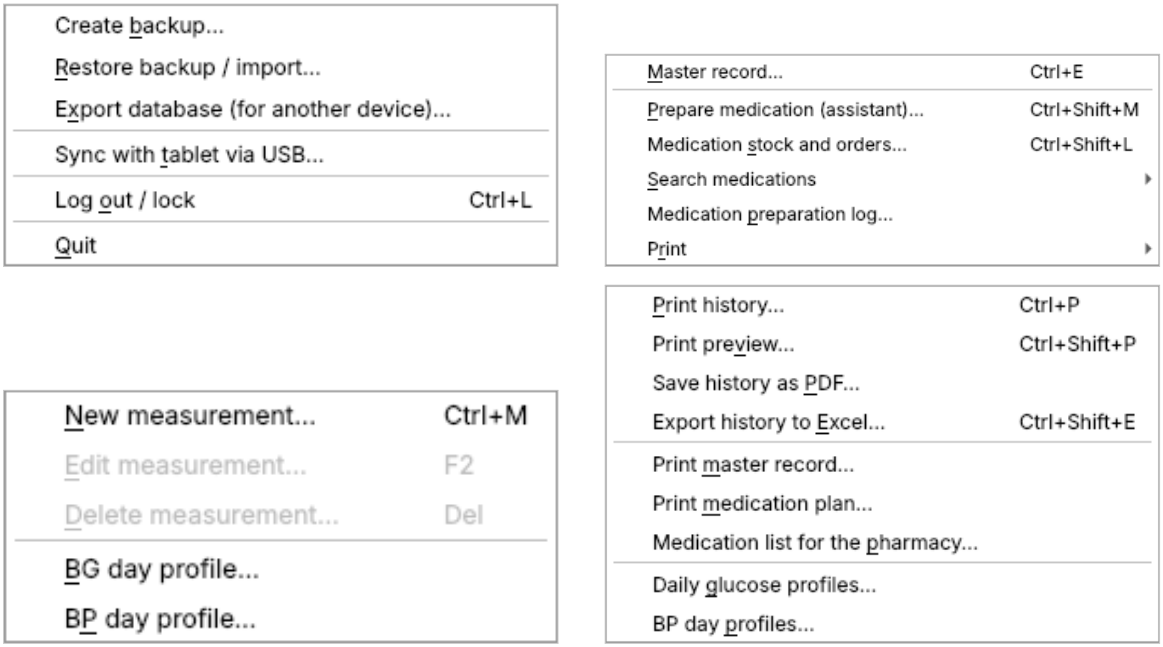

**Fig. 4:** The menus File, Person, Readings and Output

**File** Create and restore backups, export data for another device, synchronise with a tablet or smartphone, log out and quit.

**Person** Master record, prepare medication, medication stock and orders, search medications and printouts about you.

**Readings** New measurement, edit or delete a measurement, BG and BP day profile.

**Medical record** Add, show, print and send documents.

**Appointments** New appointment, appointment planner, export appointments.

**Output** Print, print preview, PDF and Excel, print the master record and medication plan, list for the pharmacy, day profiles.

**Tools** Settings, password and recovery key.

**Help** This user guide (F1), Getting Started, demo, disclaimer.

## 3.2 Important keys

| Key | Effect |
|---|---|
| Ctrl + M | New measurement |
| F2 | Edit selected measurement |
| Ctrl + E | Open master record |
| Ctrl + Shift + M | Prepare medication |
| Ctrl + T | New appointment |
| Ctrl + P | Print |
| Ctrl + L | Lock |
| F1 | User guide |

# 4 The master record

The master record contains your personal details. Open it with Person » Master record or Ctrl + E. It has five pages (tabs). When you have finished, click Save.

## 4.1 Person

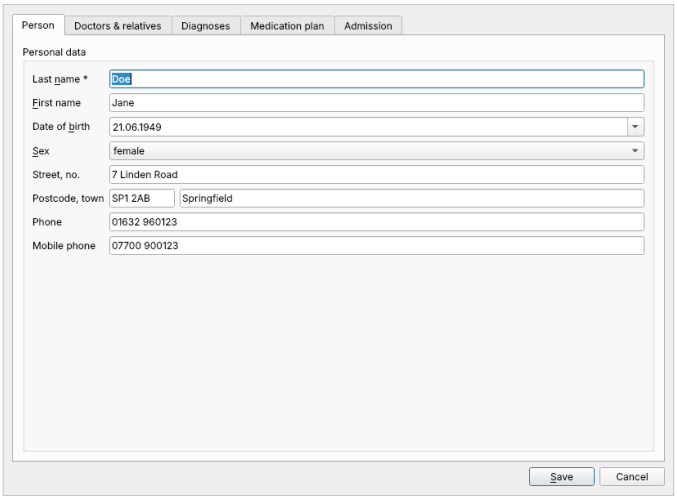

**Fig. 5:** Master record, page **Person**

Surname, first name, date of birth, sex, address, telephone and mobile phone. Only the surname is required. VitaParms light needs the date of birth for the age shown in the header of the main window.

## 4.2 Doctors & relatives

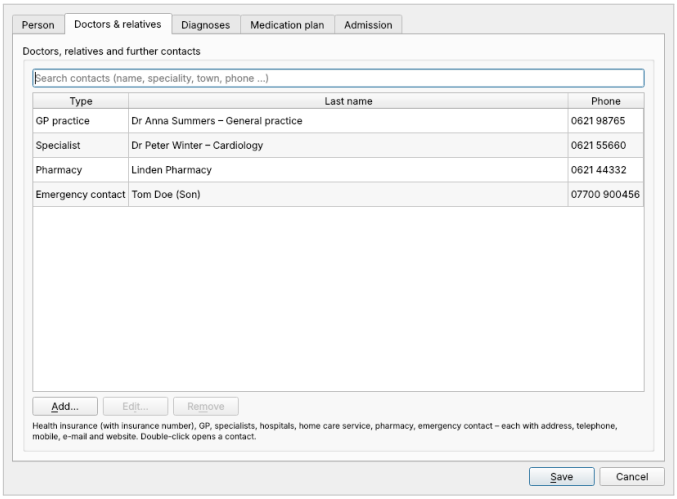

**Fig. 6:** Doctors, relatives and further contacts

Collect all important contacts here: GP practice, specialists, hospital, pharmacy, health insurance, care service, **relatives** and an **emergency contact**.

1. Click Add... .
2. Choose the *Type*, for example *GP practice* or *Relative*.
3. Enter name, address, telephone and – if available – e-mail.
4. Confirm the contact and then click Save in the master record.

A double-click opens a contact for editing. The search field quickly finds a contact again.

## 4.3 Diagnoses

Write each diagnosis on a separate line, ideally with the code from the doctor's letter (ICD-10), for example *Essential hypertension (I10.90)*. Below, enter **allergies**

**and intolerances** and, if you like, remarks.

> **Tip:** Diagnoses and allergies appear in the header of the main window and on the printout for the pharmacy. So you have everything together at the doctor's or at the pharmacy.

## 4.4 Medication plan

On this page you manage your medication. Everything about it is in Chapter 8.

## 4.5 Admission

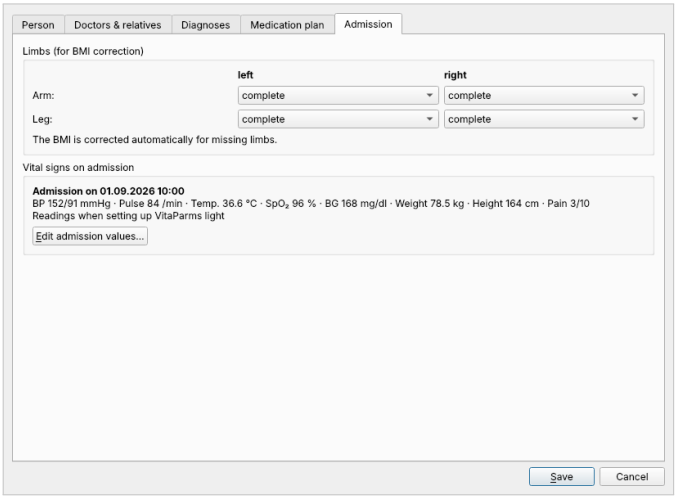

**Fig. 7:** Limbs for the BMI and vital signs on admission

**Limbs** If an arm or leg is missing completely or partly, enter it here. VitaParms light then calculates the **BMI** correctly: the body weighs less without the missing limb, and this is taken into account.

**Vital signs on admission** Your baseline readings – for example when you first set up VitaParms light or at the start of a treatment. Click Record admission values... . The values appear at the bottom of the journal (timing *on admission*) and on the printed master record.

> **Note:** VitaParms light manages exactly **one person**. If you want to keep the readings of several people – for example as a carer – use VitaParms.

# 5 Entering readings

## 5.1 A new measurement

You have measured your blood pressure and pulse and want to enter the values.

1. Click New measurement... (or Ctrl + M).
2. Date and time are already filled in. If you measured earlier, change the time. Now inserts the current time again.
3. If needed, choose a *Timing*, for example *fasting* or *at bedtime*. You can also type your own.
4. Enter the values. Leave empty what you have not measured.
5. Under *Observations*, write what matters to you – for example *headache since the morning* or *after the walk*.
6. Click Save.

**Tip:** Measuring several times in a row, for example for a day profile? Click Save & next measurement. The form stays open and is ready for the next reading straight away.

## 5.2 The values in detail

**Blood pressure (sys / dia)** The upper (systolic) and lower (diastolic) value in mmHg. Always enter both.

**Pulse** Heartbeats per minute. Most blood pressure monitors show it too.

**Body temperature** In degrees Celsius, for example *37.4*.

**Oxygen saturation ($SpO_2$)** In percent, measured with the finger clip (pulse oximeter).

**Blood glucose** In mg/dl or mmol/l – choose the unit under Tools » Settings.

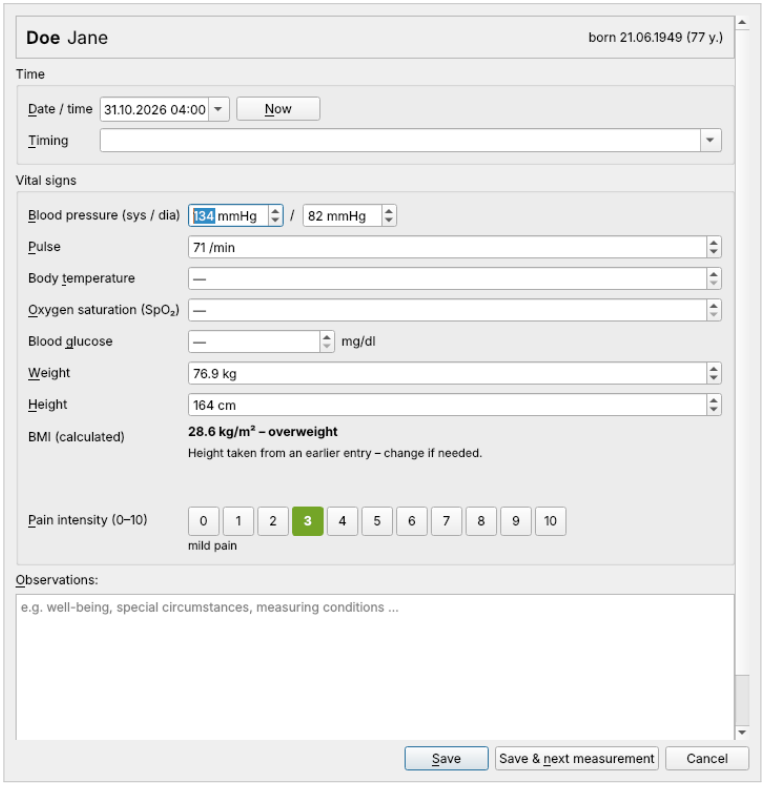

**Fig. 8:** The measurement form of VitaParms light

**Weight and height** You only need to enter your height once; VitaParms light remembers it.

**BMI** VitaParms light calculates the body mass index from weight and height and adds the category, for example *normal weight*. Missing limbs from the master record are taken into account (Section 4.5 (p. 9)).

**Pain intensity** How strong is your pain right now? Click a number from **0** (no pain) to **10** (worst pain imaginable). The colour goes from green to red. A second click on the same number removes the entry again.

## 5.3 Measuring correctly

**Blood pressure** Sit quietly for 5 minutes before measuring and do not talk. Always measure on the same arm, with the cuff at heart level. Ideally in the morning before your tablets and in the evening.

**Blood glucose** Wash your hands with warm water and dry them well. Wipe away the first drop if your meter requires it.

**Oxygen saturation** Measure with warm fingers and without nail varnish. Read the value only when it no longer changes.

**Weight** Weigh yourself at the same time if possible, for example in the morning after getting up.

## 5.4 The journal

The **Journal / history** tab lists all readings – the newest at the top. At the top you choose the *Period*: all readings, the last 7, 30 or 90 days, the last year or a custom period (*From – to*). On the right you see how many readings there are.

**Edit** Double-click a row or press F2.

**Delete** Select the row and click Delete measurement... – VitaParms light asks first.

**Admission values** The tick *Show admission values* shows or hides the values from the master record.

Below the list you can print the history, save it as PDF or export it to Excel (Chapter 7).

# 6 Day profiles

For a **day profile** you measure at fixed times throughout a whole day. This shows your doctor how your blood glucose or blood pressure changes over the day. VitaParms light has two assistants for this. They remind you at the right time and open the matching form straight away.

## 6.1 BP day profile (blood pressure)

> Your doctor would like you to measure your blood pressure throughout tomorrow.

1. Choose Readings › BP day profile.

2. Choose the *Day*. If it is already late, VitaParms light suggests the next day.

3. Six times are preset: in the morning after getting up (before tablets), late morning, midday, afternoon, evening and before going to bed. Adjust the times or remove the tick for a time.

4. Leave *Reminder with sound* switched on if you would like to hear a signal.

5. Click Start day profile.

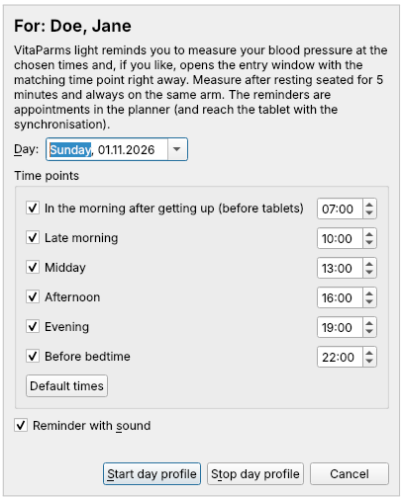

**Fig. 9:** The assistant for the BP day profile

A reminder appears at each time. Click Record measurement… in it: the measurement form opens with the right timing and the cursor already in the blood pressure field. After saving, the reminder is done.

> **Note:** The reminders are ordinary appointments. They appear in the appointment planner and also reach the tablet or smartphone with the synchronisation. To cancel the profile, open the assistant again, choose the day and click Stop day profile.

## 6.2 BG day profile (blood glucose)

The BG day profile works the same way: Readings › BG day profile. It has seven times: fasting before breakfast, before and 2 hours after each of the three meals, and before going to bed. With the reminder the cursor is already in the blood glucose field.

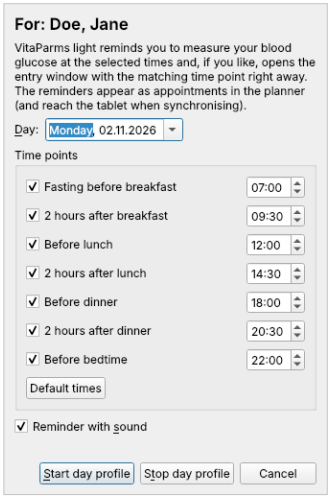

**Fig. 10:** The assistant for the BG day profile

## 6.3 Viewing and printing day profiles

Under Output › BP day profiles or Output › Daily glucose profiles VitaParms light arranges your readings as a table: one row per day, one column per time, averages at the bottom. Unusual values are highlighted. You can print the table, save it as PDF or export it to Excel.

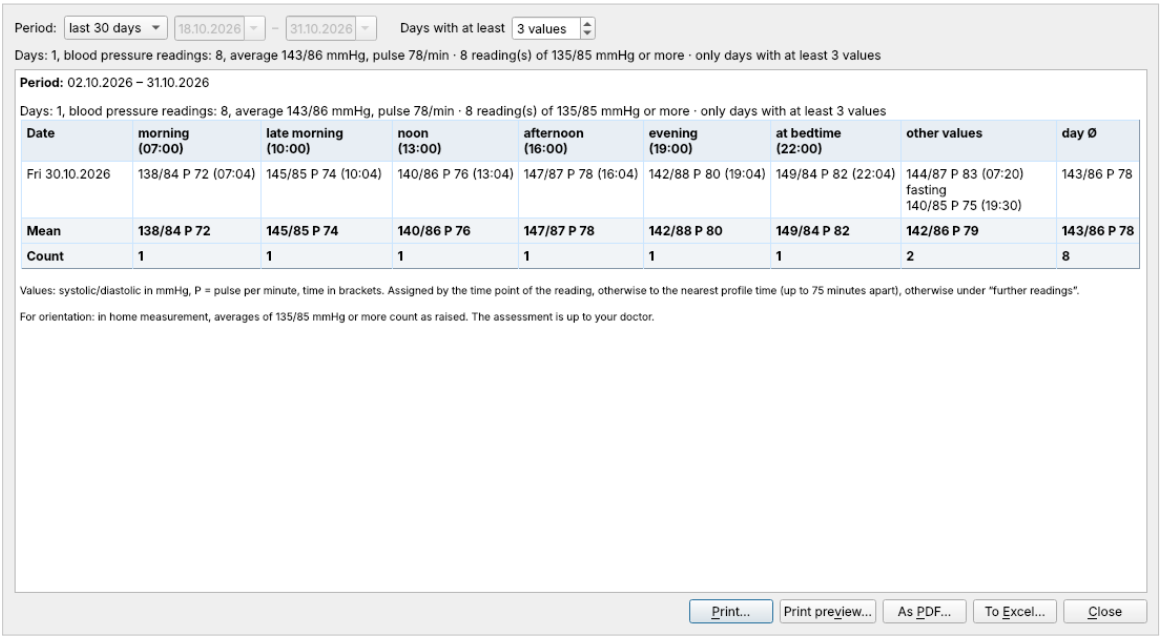

**Fig. 11:** BP day profiles: blood pressure and pulse per time with averages

**Tip:** With *Days with at least … readings* you hide days on which you measured only once or twice. Set *1* to see every day with a reading.

**For orientation:** In home measurement, averages of 135/85 mmHg or more count as raised. What your readings mean is for your doctor to judge.

# 7 Chart, printing, PDF and Excel

## 7.1 The chart

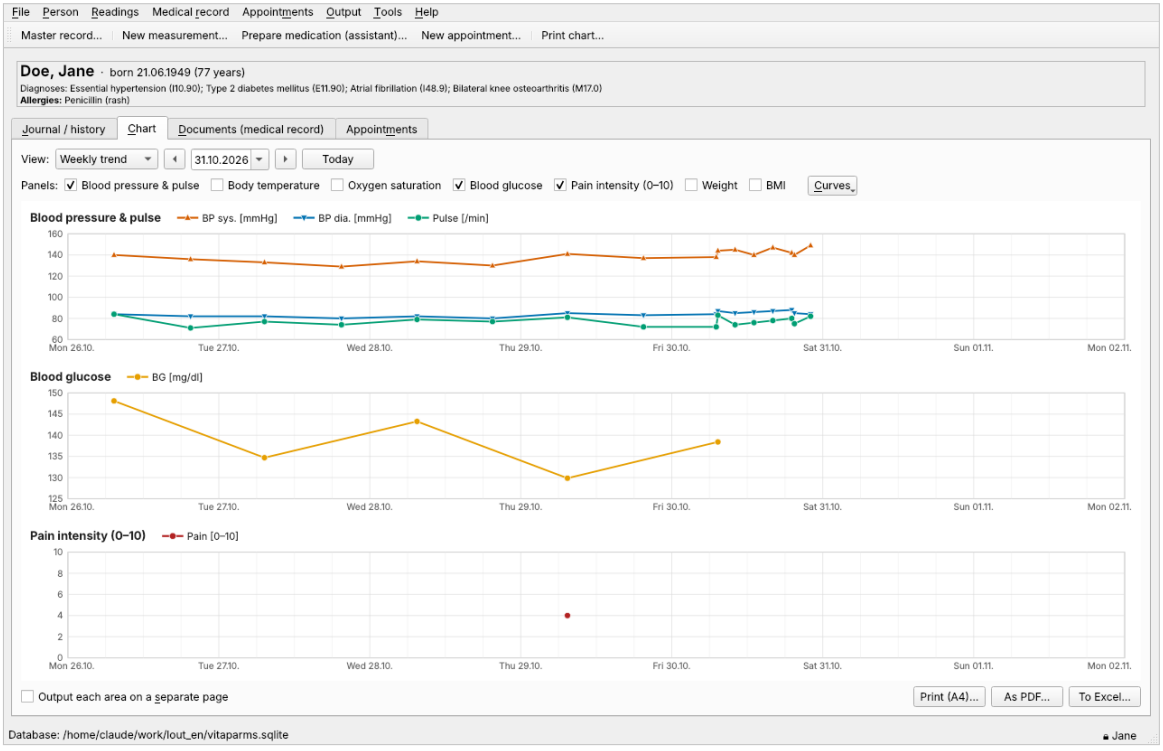

**Fig. 12:** Trend charts for blood pressure and pulse, blood glucose and pain

The **Chart** tab shows your readings as curves.

**View** *Daily profile, Weekly trend, Monthly trend, Yearly trend* or *Custom period*.

**Browse** The arrows move one day, week, month or year forward or back. Today jumps back to today.

**Panels** Choose which curves you want to see: blood pressure & pulse, body temperature, oxygen saturation, blood glucose, pain intensity, weight and BMI.

**Curves** Clicking an entry in the legend hides a single curve or shows it again.

Each curve has its own colour and its own markers (circle, triangle, square …). So you can tell the curves apart even if you find colours hard to distinguish or print in black and white.

## 7.2 Printing, PDF and Excel

At the bottom of the **Journal / history** and **Chart** tabs you find the buttons for output; the same commands are in the Output menu.

**Print** Prints on A4. Output » Print preview shows beforehand what it will look like.

**PDF** Saves a PDF file – handy for e-mailing it to the practice.

**Excel** Saves an Excel spreadsheet (`.xlsx`) with all values.

> **Tip:** On the **Chart** tab you can tick *Output each area on a separate page*. Each curve then gets a page of its own, in a large size.

## 7.3 Further printouts

In the Output menu and under Person » Print:

**Master record** Your details, contacts, diagnoses, admission values and the current medication plan at a glance – good for a doctor's visit or a hospital stay.

**Medication plan** Your medicines with the times to take them, to put up at home.

**Medication list for the pharmacy** See Section 8.4 (p. 19).

**Day profiles** The tables of the BG and BP day profiles (Chapter 6).

**Reminders** Your upcoming appointments.

# 8 Medication

## 8.1 The medication plan

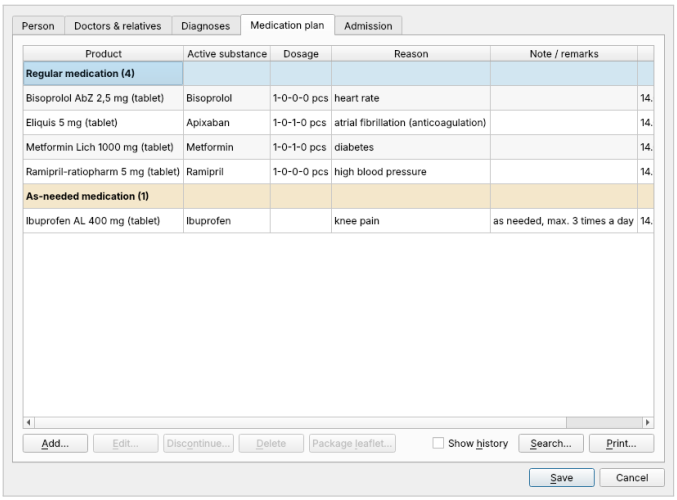

**Fig. 13:** The medication plan in the master record

You manage your medicines in the master record on the **Medication plan** page. They are sorted by type: **regular medication** (taken according to plan), **as-needed medication**, **emergency medication** and **other** (for example ointments).

## 8.2 Adding a medicine

1. Open the master record (Ctrl + E) and the **Medication plan** page.
2. Click Add...
3. Enter the *brand name* (as printed on the pack), the *active substance*, the *strength* and the *reason*.
4. Under *Dosage* enter how much you take in the morning, at midday, in the evening and at night, for example *1 – 0 – 1 – 0*.
5. Choose the *Type*, for example *Regular medication* or *As-needed medication*.
6. Click OK and, in the master record, Save.

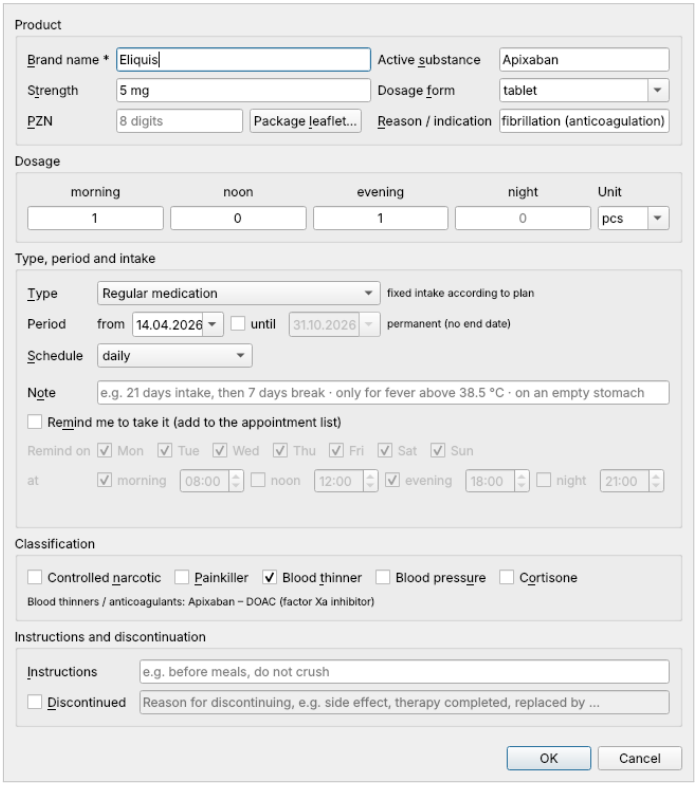

**Fig. 14:** A medicine classified as “blood thinner”

**Schedule** Not every medicine is taken daily. Choose for example *weekly* for a tablet on Sundays.

**Remind me to take it** VitaParms light adds the times to take it as reminders to the appointment list.

**Package leaflet** With the PZN (the German pharmaceutical number on the pack), Package leaflet... opens the leaflet on the internet.

**Discontinue** Do not delete a medicine you no longer take; discontinue it instead (Discontinue...). It then remains in the history.

## 8.3 Warnings

VitaParms light recognises certain kinds of medicine by the active substance and classifies them: **controlled narcotics**, **painkillers**, **blood thinners**, **blood pressure medication** and medicines **containing cortisone**. You see the classification in the medicine window under *Classification*; you can also set or remove it yourself.

Person › Search medications quickly finds, for example, all blood thinners – handy when the dentist asks whether you take “something to thin the blood”.

**Emergency medicines** are shown in red in the header of the main window so that they can be seen at once in an emergency.

## 8.4 List for the pharmacy

VitaParms light does **not** check for interactions itself – your pharmacy can do that much better. Print the Output › Medication list for the pharmacy for this. It contains all current medicines with active substance and PZN, your age, weight, allergies and diagnoses, and a checklist for over-the-counter products and supplements.

> **Tip:** In Germany, if you take five or more medicines long-term, you are entitled to a free, detailed medication review at the pharmacy once a year.

## 8.5 Preparing medication (assistant)

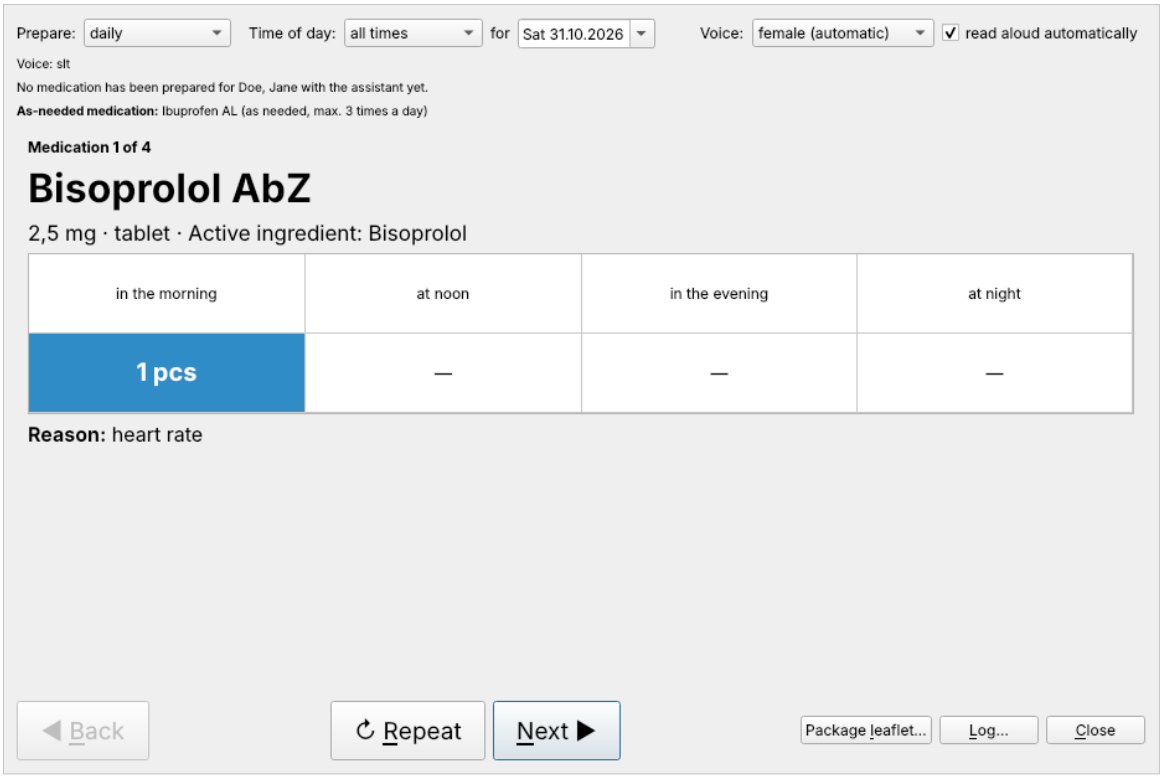

Fig. 15: The assistant guides you through preparing your medication

The assistant helps you fill your pill organiser. Start it with Prepare medication (assistant)… or Ctrl + Shift + M.

1. At the top under *Prepare,* choose whether you prepare for one day (*daily*) or for a whole week, and the day from which you prepare.

2. The assistant shows one medicine after another – large and easy to read, with the amount for the morning, midday, evening and night. If you like, it reads everything out.

3. Put the tablets into the box and click Next. Repeat shows or reads the medicine again, Back goes back one.

4. At the end VitaParms light saves when you prepared them. The log is under Person » Medication preparation log.

## 8.6 Stock and orders

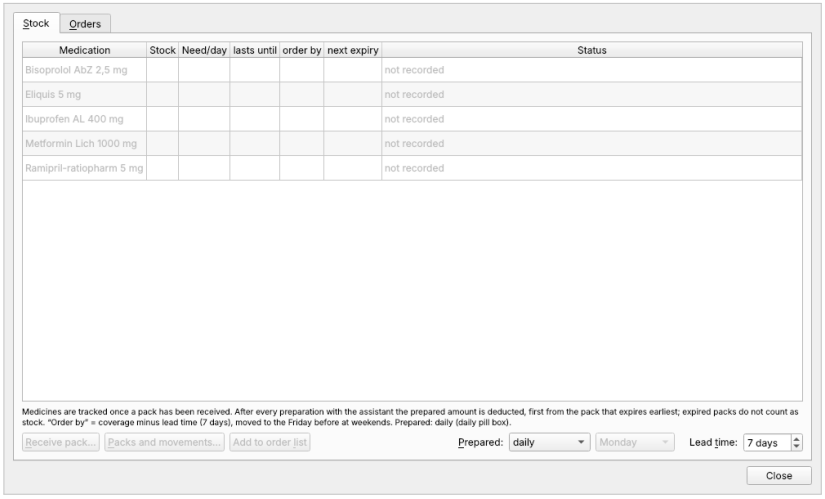

**Fig. 16:** Stock and orders

Under Person » Medication stock and orders you enter how many tablets you have left. VitaParms light calculates how long they will last and reminds you to re-order in good time. You can print the order list or send it to the pharmacy.

# 9 Documents (medical record)

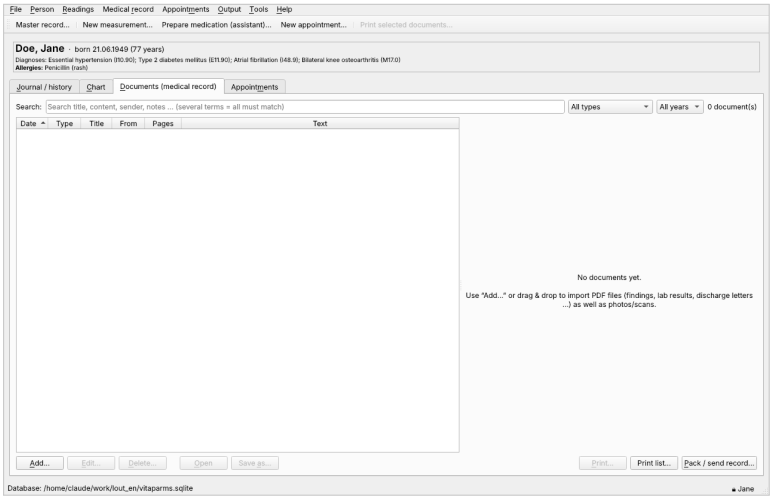

**Fig. 17:** The Documents (medical record) tab

On the **Documents (medical record)** tab you keep doctor's letters, findings, lab results, X-rays or your living will – as PDF or image. Everything is stored encrypted in VitaParms light.

1. Choose Medical record » Add documents (Ctrl + D).
2. Select one or more files, for example a scanned doctor's letter.
3. VitaParms light suggests date, type and title (for PDFs from the text). Check the details and save.

**Show** Double-click a document.

**Search** The search field also searches the text inside the PDFs.

**Pass on** Medical record » Pack record / send by e-mail packs the selected documents into a ZIP archive – with a password if you like – and opens your e-mail program.

**Print list** Medical record » Print document list.

> **Tip:** With your smartphone you photograph a doctor's letter straight into the medical record (Chapter 11).

# 10 Appointments and reminders

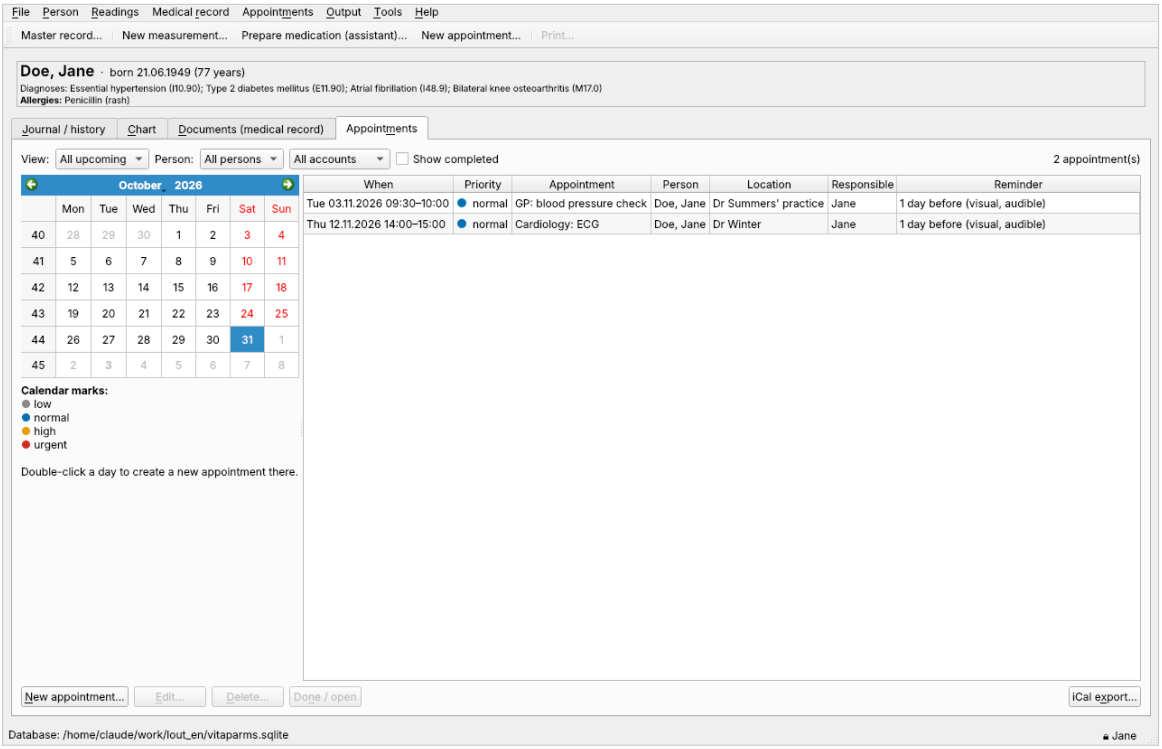

**Fig. 18:** The appointment planner

## 10.1 Adding an appointment

1. Click New appointment... (Ctrl + T).
2. Enter a *Title*, for example *GP: blood pressure check*, together with date, time and place.
3. Under *Reminder* choose the *Advance notice*, i.e. when VitaParms light should remind you – for example one day before.
4. Click Save.

Recurring appointments (such as physiotherapy every week) are created as a **series**: in the appointment, under *Recurrence*, choose for example *weekly* at *Repeat*.

## 10.2 Reminders

At the set time a reminder window appears – with a sound if you like. You can choose Remind me later (in 5 to 60 minutes), open the appointment or mark it as Done. Reminders appear while VitaParms light is running. On the smartphone the app also reminds you when it is in the background.

On start-up VitaParms light shows today's and tomorrow's appointments. Appointments » Appointments today and tomorrow brings up this overview at any time.

> **Tip:** Appointments » Export appointments (iCalendar) transfers your appointments to another calendar, for example on your phone.

# 11 Tablet and smartphone

VitaParms light is available as an app for Android tablets and smartphones. The app can do the same as the program on the computer – with large buttons that are easy to use with your finger.

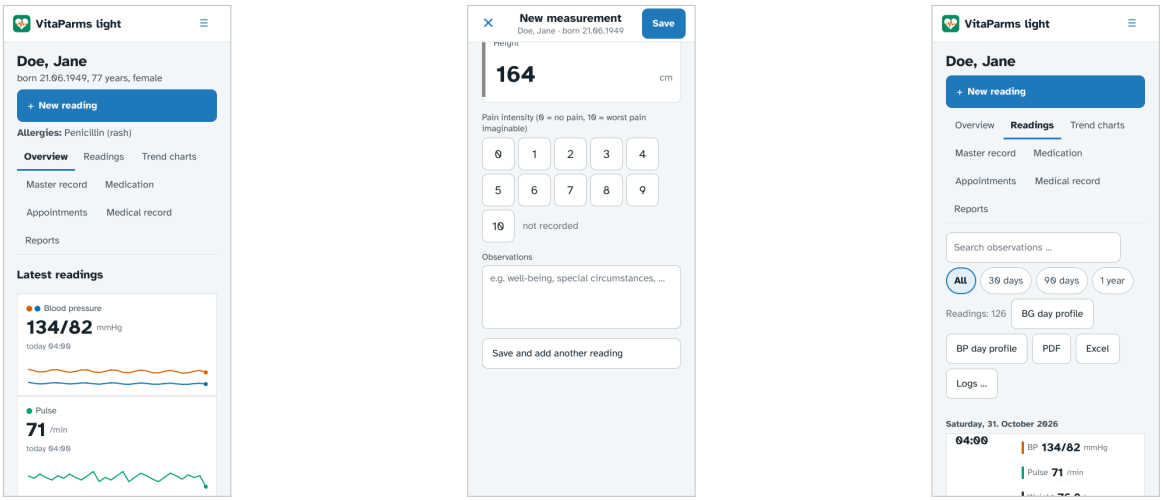

**Fig. 19:** VitaParms light on the smartphone: overview, measurement with pain scale and readings

## 11.1 Setting up the app

On the first start you choose the language, read the note and decide:

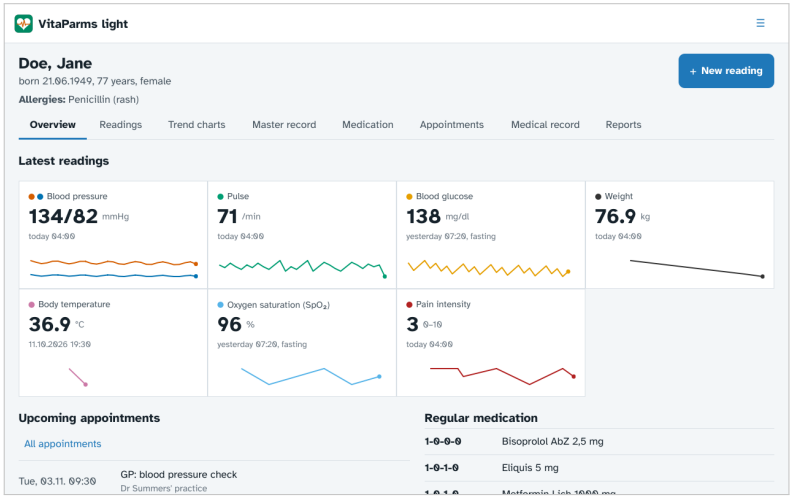

**Fig. 20:** VitaParms light on the tablet: the overview with the latest readings

**Take over from the computer via USB cable** You have already set up VitaParms light on the computer. The app takes over your data via the USB cable (Section 11.3 (p. 25)).

**Take over database file** On the computer you have created a file (`*.vpdb`) with File › Export database and copied it to the device.

**Start fresh** You use VitaParms light only on the tablet or smartphone.

## 11.2 Using the app

At the top you see your name and the large button + New reading. Below it you choose the page: **Overview**, **Readings**, **Trend charts**, **Master record**, **Medication**, **Appointments**, **Medical record** and **Reports**. On the smartphone, swipe the bar sideways to see all pages.

The ☰ menu at the top right gives you the synchronisation with the computer, the settings and the quick guide; this is also where you lock and quit the app.

- **Measurement:** tap the values and type them in. Choose the pain intensity with one of the large numbers 0 to 10.
- **Day profiles:** on the **Readings** page you find BG day profile and BP day profile.
- **Prepare medication:** on the **Medication** page.
- **Reports:** history, charts, day profiles, medication plan and the pharmacy list as PDF or Excel – to view or share.

- **Photo into the medical record:** on the **Medical record** page, photograph a doctor's letter directly.

## 11.3 Synchronising with the computer

Computer and app synchronise via the **USB cable**. Afterwards both have the same, latest state – no matter where you entered something last.

1. Once only: switch on **USB debugging** on the tablet or smartphone (Settings → About phone → tap *Build number* seven times, then *USB debugging* under Developer options).
2. Connect the device with the USB cable and open VitaParms light on it.
3. On the computer choose File » Sync with tablet via USB.
4. Click Connect and then Synchronise. The very first time, transfer your database to the device with Computer → tablet… instead.

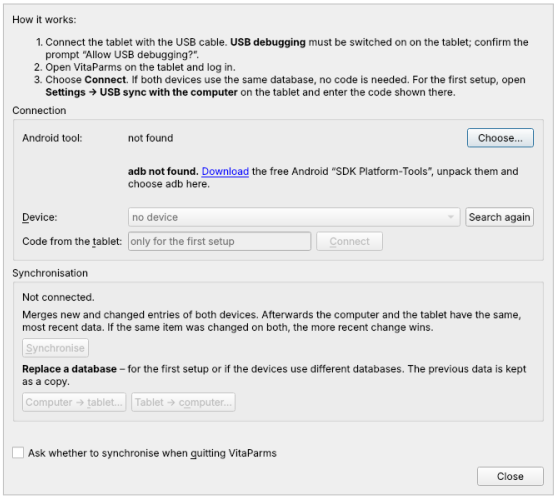

**Fig. 21:** Synchronising via the USB cable

> **Note:** For synchronising, the computer needs Google's small helper program `adb` (free, "SDK Platform-Tools"). The window shows a download link.

# 12 Security and backup

## 12.1 Password and recovery key

Fig. 22: Tools » Password and recovery key

Under Tools » Password and recovery key:

**Change own password** Enter the current password and the new one twice.

**Show recovery key** For safety, VitaParms light first asks for your password. You can print or save the key again.

## 12.2 Automatic backup

VitaParms light backs up your data **automatically**: when you quit, if something has changed, and on start-up, if the last backup is more than a day old. The last seven backups are kept. You do not have to do anything.

> **Tip:** At first the backups are on the same hard disk as your data. If the computer breaks, they are lost too. So under Tools » Settings, at *Automatic backup* → Configure..., choose a **USB stick** or a cloud folder as the backup folder.

If the backup folder cannot be reached (USB stick not plugged in), VitaParms light tells you. If there has been no backup for a week, VitaParms light points this out clearly.

## 12.3 Manual backup

**Create backup** File » Create backup – choose a folder, for example on a USB stick. Two files are created: the database (`.sqlite`) and the key file (`.sqlite.keys`). Always keep both together.

**Restore backup** File » Restore backup / import – choose the backup. The previous state is kept as a copy.

> **Note:** Backups are encrypted just like your data. To open them you need your password or the recovery key.

## 12.4 Settings

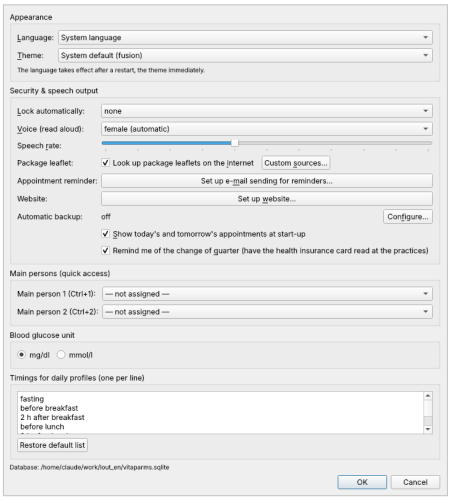

Fig. 23: Tools » Settings

Under Tools » Settings you choose, among other things, the language, the appearance (light or dark), the unit for blood glucose (mg/dl or mmol/l), after how many minutes without use VitaParms light locks itself, and whether today's and tomorrow's appointments are shown on start-up.

# 13 Switching to VitaParms

One day VitaParms light may no longer be enough – for example because you also want to keep your partner's readings or need further values such as INR or fluid intake. Then you switch to VitaParms. **You take your data with you.**

1. Install VitaParms. Both programs can be installed side by side.
2. In VitaParms choose File › Import database of the light edition.
3. VitaParms suggests the VitaParms light database on this computer. Confirm it (or choose a backup or a `*.vpdb` file).
4. Sign in with your name and password from VitaParms light.
5. VitaParms creates a backup and takes over your person with all data: master record, readings, medication, appointments, contacts and documents.

> **Note:** The person is added as a **further person**; what is already in VitaParms remains unchanged. If you import the same database again, VitaParms updates the entries already taken over instead of duplicating them.

# 14 Help and answers

## 14.1 The demo

Help › Start demo database opens a second window with a fictitious person and a year of readings, medication, appointments and doctor's letters. Try everything there – the demo is created afresh on every start and your own data are not touched. To end it, close the demo window.

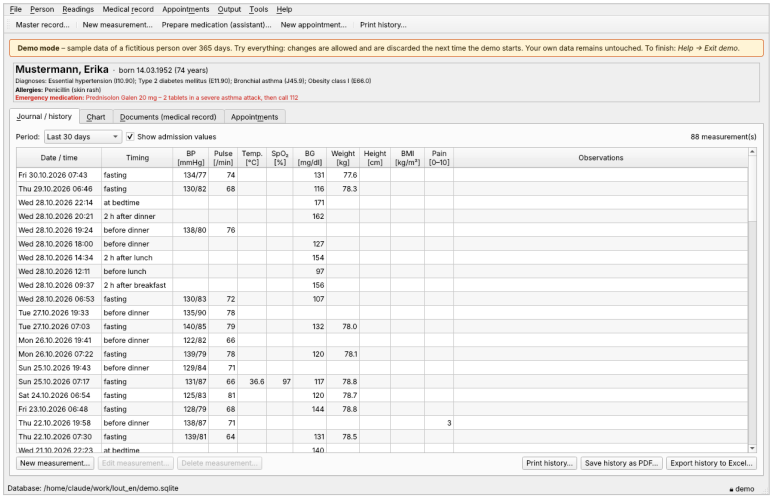

**Fig. 24:** The demo with the fictitious person Erika Mustermann

## 14.2 Frequently asked questions

**I have forgotten my password.** In the sign-in window click Recovery key… and enter the printed key. Then choose a new password.

**I entered a value wrongly.** Double-click the measurement in the journal, correct the value and save.

**A curve is missing from the chart.** Check at the top under *Panels* whether the panel is ticked, and in the legend whether the curve is hidden. Also check the period: are there any readings in this week at all?

**The BMI is not calculated.** For the BMI VitaParms light needs weight **and** height. Enter your height once – for example with the admission values in the master record.

**Synchronising with the tablet does not work.** Is the USB cable plugged in, VitaParms light open and signed in on the device and USB debugging switched on? Confirm the question “Allow USB debugging?” on the device.

**I want to show my readings to my doctor.** Print the history or the chart (Ctrl + P) or save it as PDF and send the file by e-mail. For a hospital stay the printed master record is ideal.

## 14.3 Where can I get help?

- This user guide: F1 or Help » User guide.
- The quick guide: Help » Getting Started.
- On the internet: https://github.com/mbergmann-sh.

**Legal note:** VitaParms light is not a medical device. If you have complaints or unusual readings, please contact your doctor; in an emergency call **112** (UK: **999**).
